

Mesco View Pro 3

Important info's

Installation:

- ◇ Start GPIBSetup.exe to install the USB GPIB driver. After installation, restart the PC.
- ◇ Start the application with MVPro3.exe from the USB stick.

Help:

- ◇ Specification can also be entered directly.
- ◇ can use the  button to test the specification and limit value input for each test step. Only when you press the CHANGE button does the test step switch to the test program. [TEST+CHANGE+INSERT ... next step]

- ◇ to save the result data, the file must be opened before starting the tests. The results are only saved at the end of the test step cycle. If the PC crashes, no results are lost.
- ◇ Value error means that the comma or point is an incorrect entry.
- ◇ Graphic settings  are only possible after the .
- ◇ BIAS graphic must be selected in the  (INT ON or EXT ON).
- ◇ the results in the graphic area are saved in a CSV file and can be load. It is very important that the selected  entries match the results. If these are not adjusted, the load graphic may be displayed incorrectly.

Note: Only USB RS232 drivers are installed on the PC.

If you need a special calculation or function of the results, please contact us.
If errors appear on the screen, please send a screenshot to info@SETskiba.de.
